DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The use of trademarks such as "Bio-Oss" has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Linkow (3,624,904) in view of Green (3,634,937). Linkow discloses biocompatible forms (e.g. 15) which *may be* permanently implanted in a patient's oral cavity for use in supporting bone graft material; a first side portion, a second side portion and a connecting portion,

open ends, an interior channel, said interior channel being sized and configured to receive at least a portion of an edentulous ridge of the patient and at least a portion of the bone graft material therewithin; said connecting portion including at least one protruding portion (e.g. 16), each of said protruding portions being configured to conform substantially to a predetermined, human interproximal bone contour or portions thereof; and a plurality of bone tacks (e.g. 40). However Linkow fails to disclose the forms in a kit further comprising dental tools and a sterilizable container. Green teaches a "kit" comprising sterilizable containers, dental tools and accessories for performing dental procedures (col. 1, line 54- col. 2, line 35). It would have been obvious to one of ordinary skill in the art to combine the teaching of kits comprising a sterilizable container, dental tools and accessories for performing dental procedures, as taught by Green, to the biocompatible forms as per Linkow, the motivation to combine being to better aid and train assistants, as found in Green (col. 1, lines 50-54). Please note that a plurality of articles grouped together comprise a kit, therefore the cabinets disclosed by Green constitute a kit.
